Control Solutions for Restaurants and Bars

Where functionality and ambience meet
to create an exceptional dining experience

Transform your space with connected lighting control

Much like the perfect dish is a culmination of skill and ingredients working together in harmony, creating the perfect dining experience requires several factors to work together – food, service, décor, and atmosphere.

When it comes to creating an atmosphere that enhances the dining experience, good lighting makes a world of difference.

Dynalite connected lighting control takes the guesswork out of lighting, leaving more time for restaurant owners and staff to do what they do best.

Scheduled lighting scenes deliver precise lighting, exactly when and where you need it

With Dynalite, you can schedule your lighting level changes to support and enhance your establishment's daily rhythm.

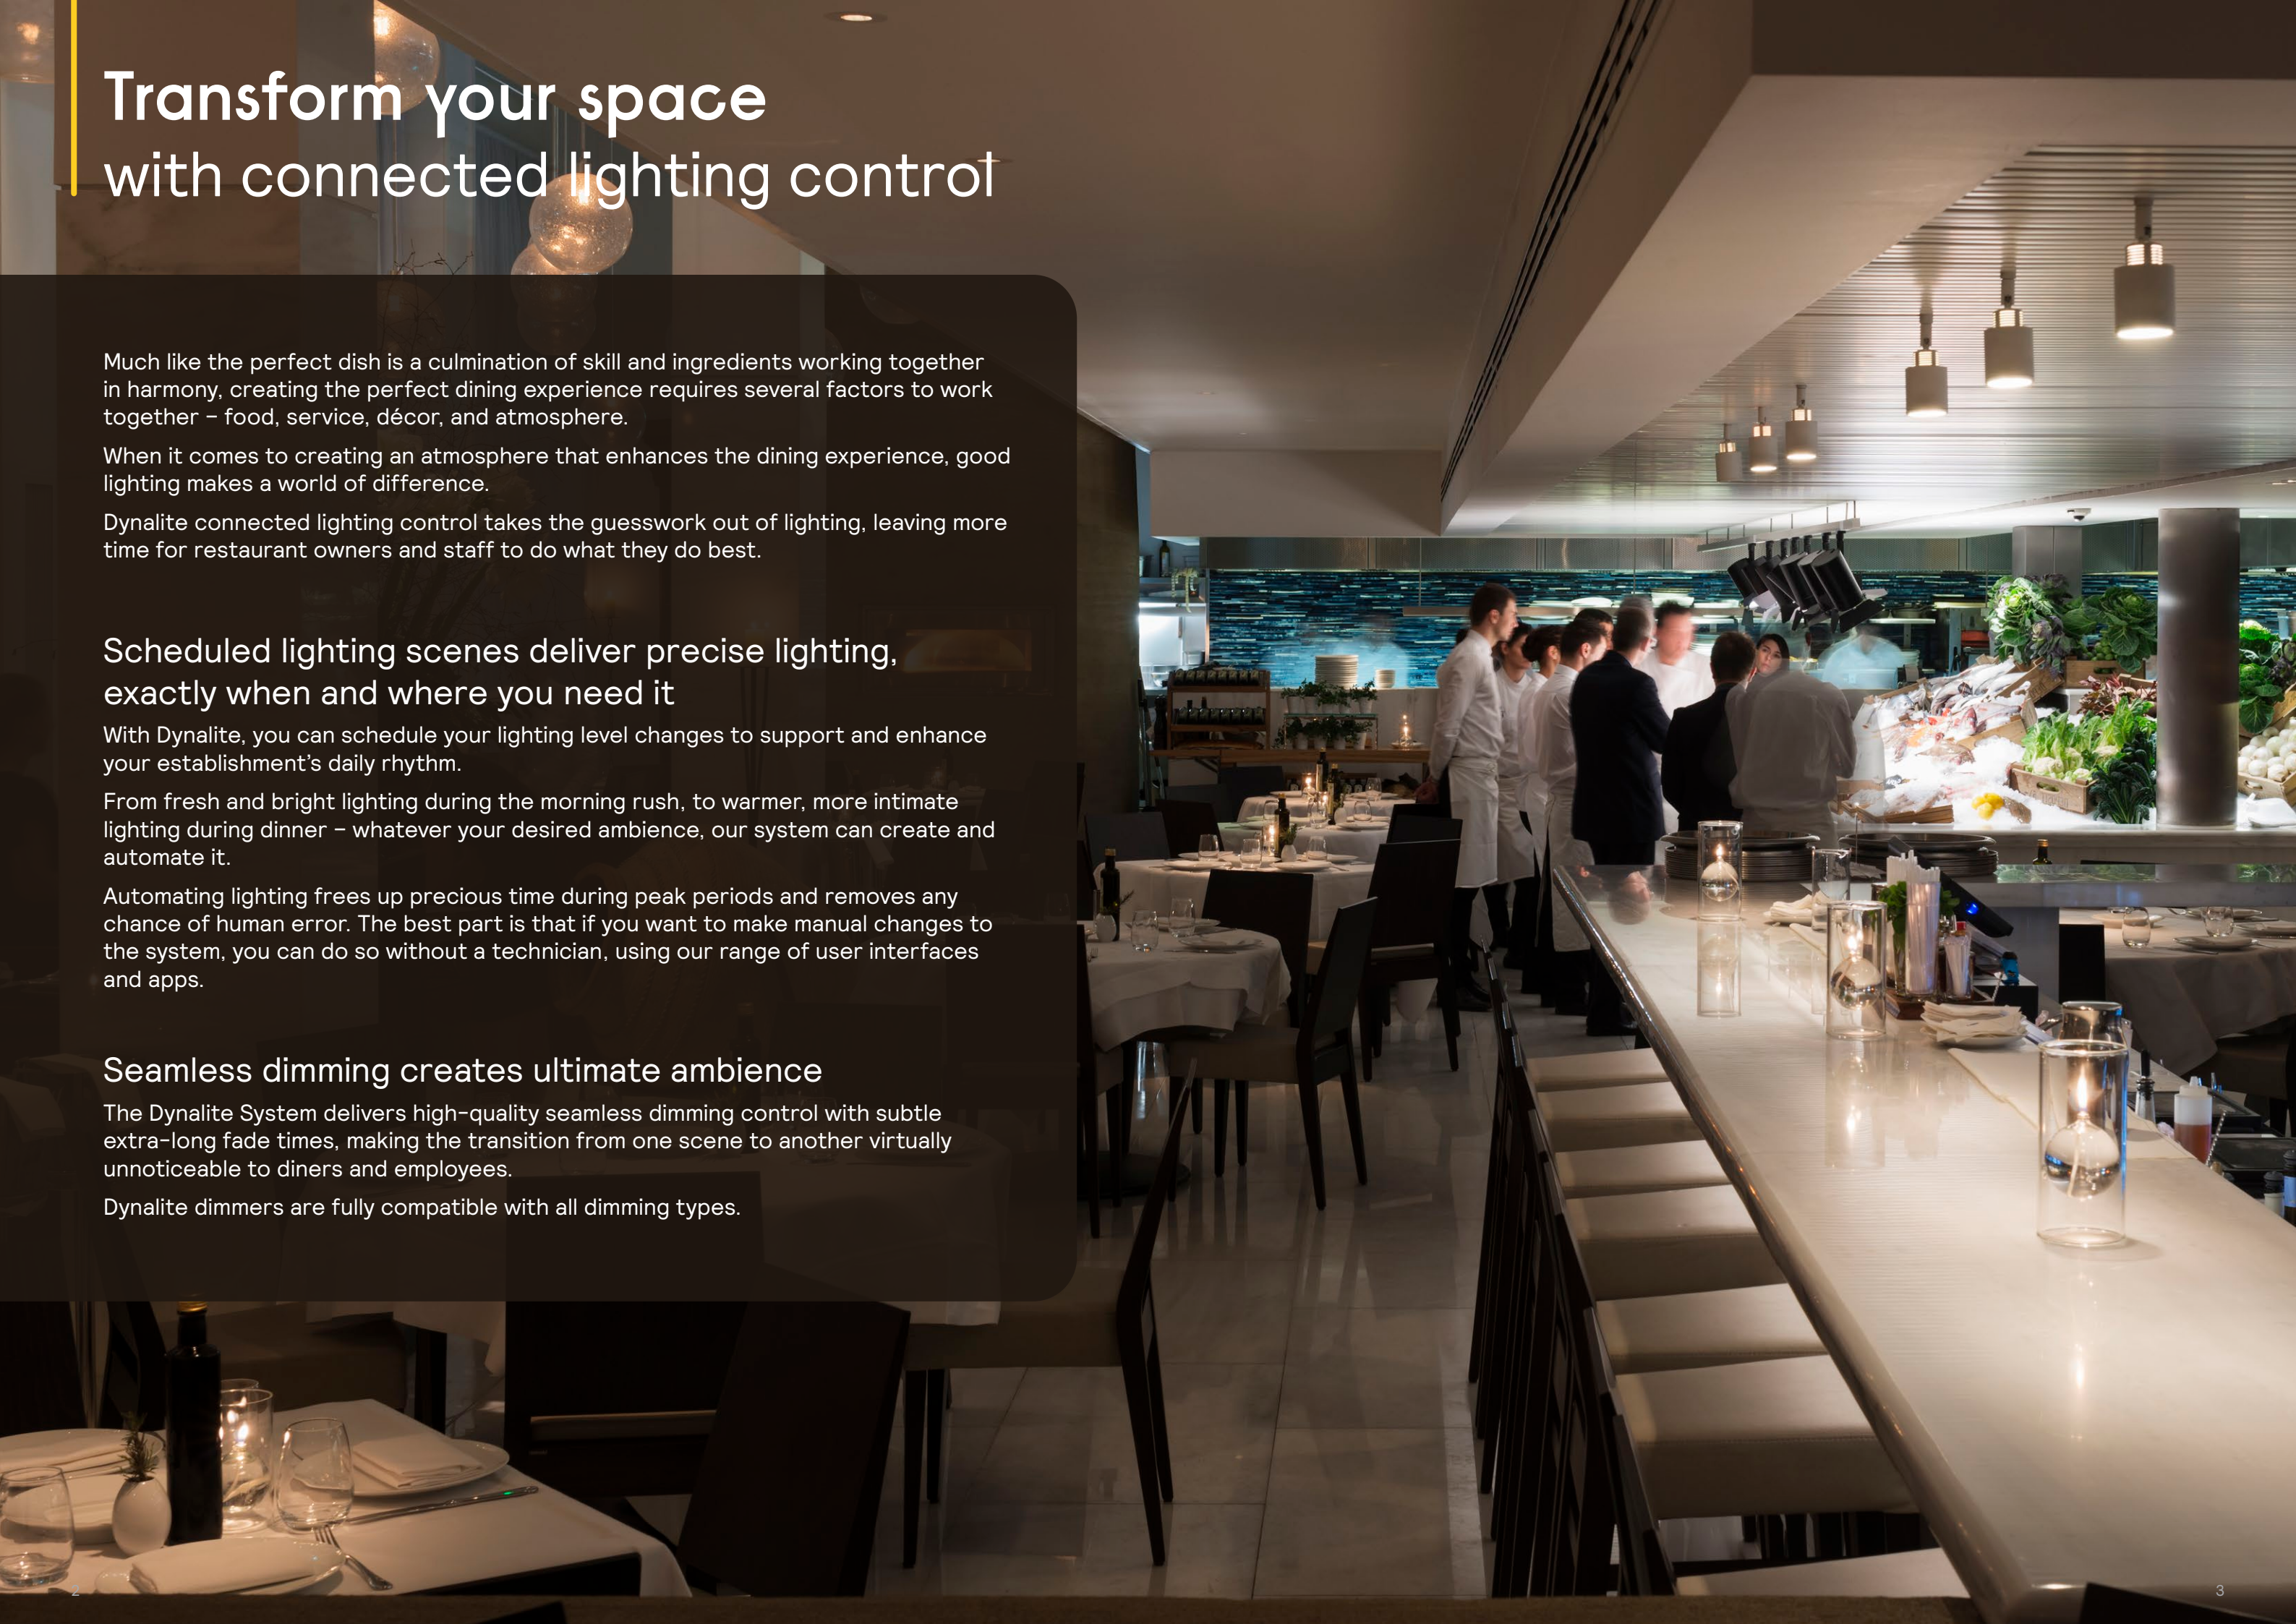

From fresh and bright lighting during the morning rush, to warmer, more intimate lighting during dinner – whatever your desired ambience, our system can create and automate it.

Automating lighting frees up precious time during peak periods and removes any chance of human error. The best part is that if you want to make manual changes to the system, you can do so without a technician, using our range of user interfaces and apps.

Seamless dimming creates ultimate ambience

The Dynalite System delivers high-quality seamless dimming control with subtle extra-long fade times, making the transition from one scene to another virtually unnoticeable to diners and employees.

Dynalite dimmers are fully compatible with all dimming types.

Beautiful user interfaces provide excellent functionality

Dynalite's stunning range of user interfaces, Antumbra, Revolution, and Touchscreen, offer users the freedom to customise their environment even further with the push of a button.

Control lighting, music levels, temperature, or cater for special events with Dynalite's suite of third-party integration features.

Dynalite user interfaces are incredibly sleek and stylish, with customisable button configurations, styles, colours and finishes to suit your environment.

Design flexibility – compatible with any luminaire

The Dynalite System is open and flexible, meaning it can control any lamp or luminaire. This allows for freedom of architectural lighting design so that you can create beautiful and iconic spaces that leave guests in awe.

Convenient apps provide next level control

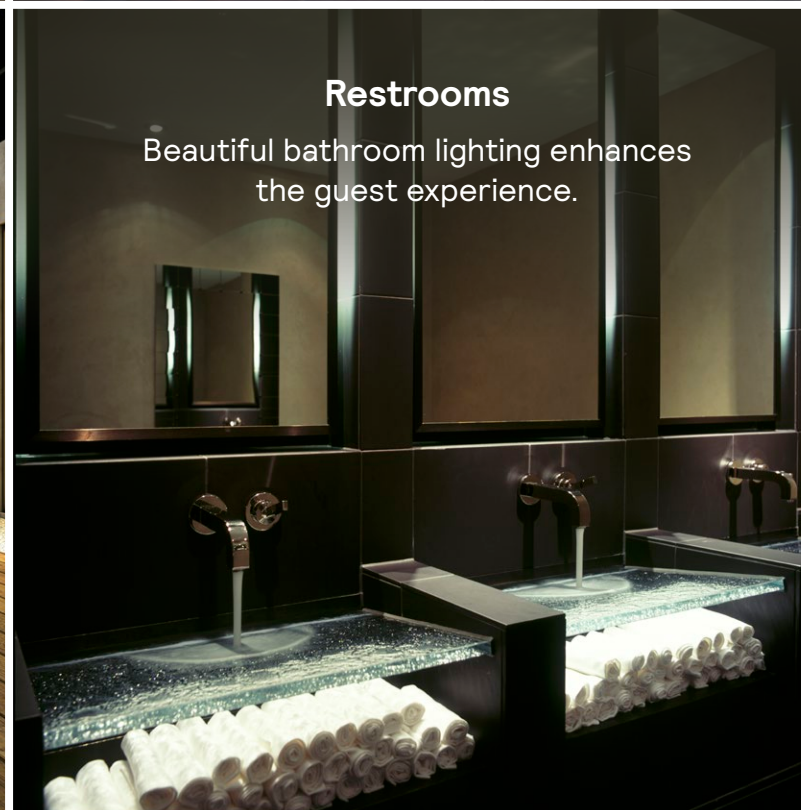

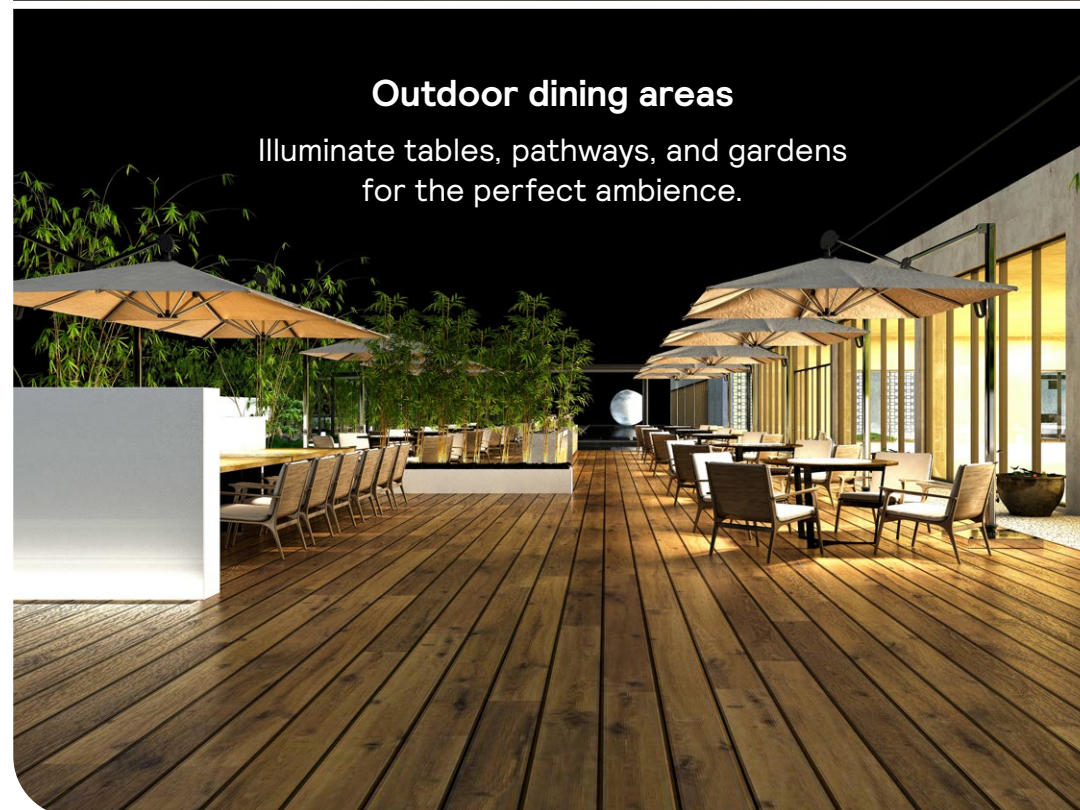

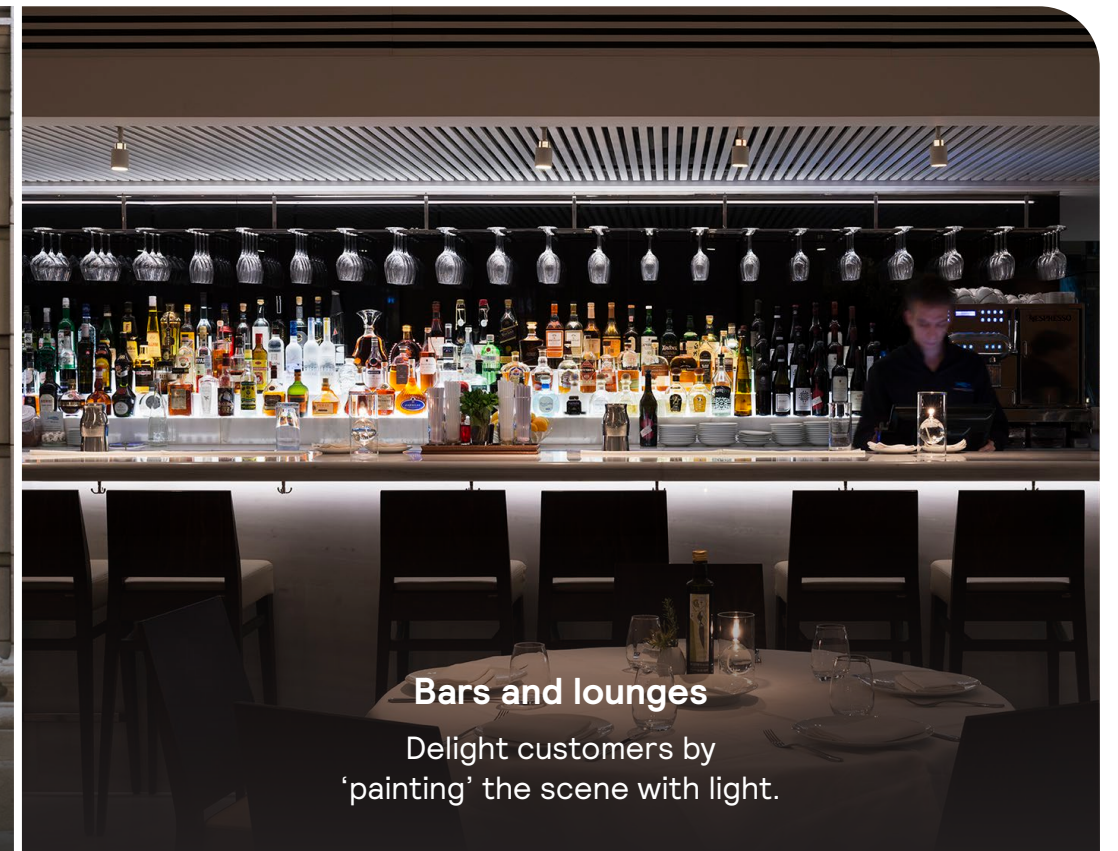

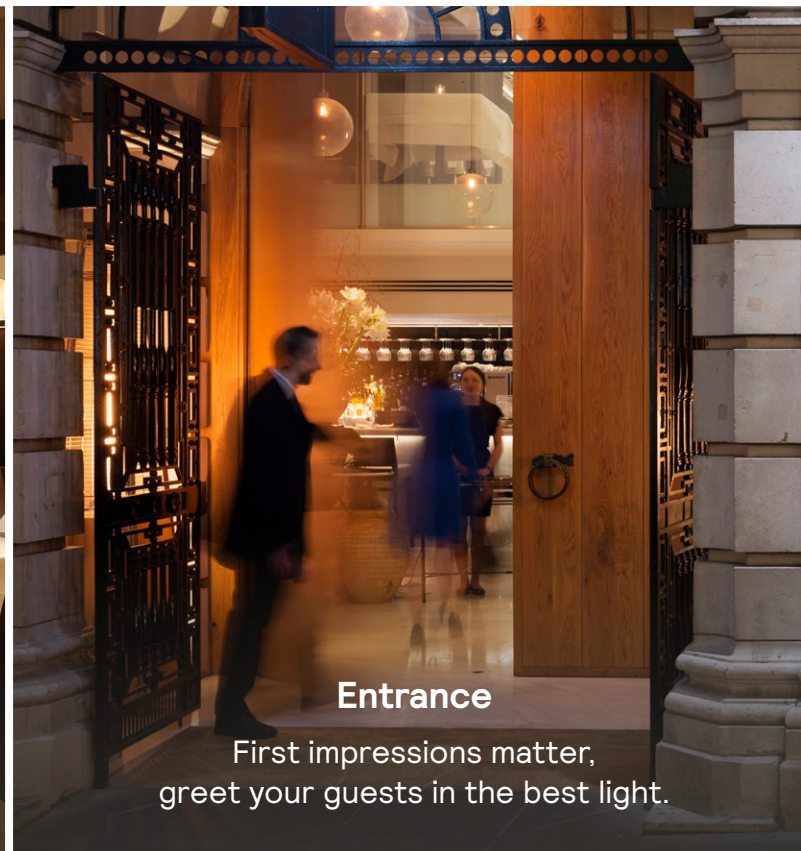

A choice of mobile applications enables restaurant owners to modify lighting levels without a factory technician. All the power you need to fine-tune your system is in the palm of your hand.

Reduce energy usage with networked sensors and scheduling

The most energy efficient light is one that is off when not needed. Sensors detect occupancy and can dim and turn off lighting when areas are vacant. The Dynalite System also makes use of natural light, reducing artificial light where possible, eliminating unnecessary power use.

Control Solutions for every space

The Dynalite System can transform any space to achieve your desired look and feel.

Create ultimate ambience with intelligent software and networked hardware

User interfaces

Dynalite user interfaces are powerful and elegant in design. They come in a wide range of finishes and button configurations to suit any interior design. Bespoke labelling with text and/or icons quickly communicates each button's function. Inbuilt temperature sensors can be used to control air-conditioning and proximity sensors enable them to light up upon approach and discreetly fade away when not needed.

With advanced building automation and intuitive control at your fingertips, Dynalite Touchscreen offers direct access to scheduling, scene editing, diagnostics and local environmental sensing. Combining Ethernet connectivity, a powerful onboard processor, and contemporary design cues from the Antumbra user interface range, the PDTs is a sleek, functional complement to any project.

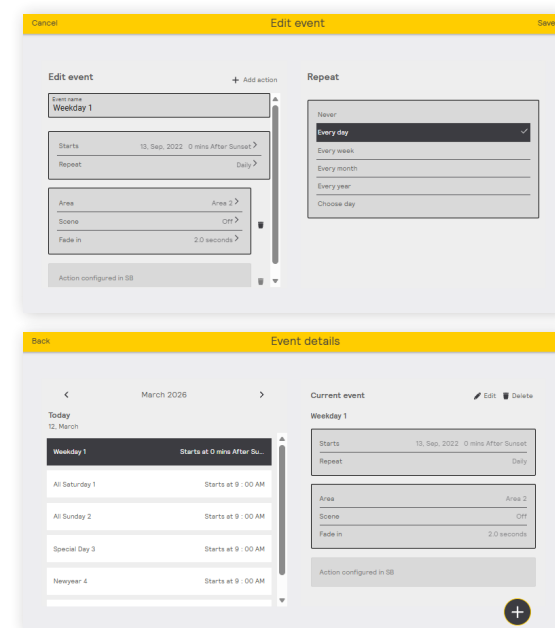

Scheduling and automation

Having the right lighting scene for each part of the day is crucial for creating the perfect ambience. With the advanced scheduling function of the Dynalite touchscreen, this can be fully automated.

From bright, vibrant scenes in the morning to soft, intimate illumination in the evening, lighting transitions can occur slowly and seamlessly throughout the day so the shift is never noticed.

The control of climate and shading systems can also be incorporated within the same schedule. Backed by a built-in time clock, the system automatically tunes itself to shifting seasons and daylight hours, delivering a true set-and-forget experience.

Mobile Apps

Unified Lighting & Space control for everything connected to your Dynalite system including lighting, climate, fans, curtains, blinds and more.

Dynalite Switch provides a rich and intuitive interface based on the Dynalite 'Array' design language. With options to personalise the scenes, create one-tap macros to trigger multiple services and favourite your most used items for easy access from the home screen.

Controllers for any lamp type

Compatible with any lighting load, including phase dimmers, relay controllers, 0-10 V & DALI signal dimmers, DMX, and PWM dimmers.

Multifunction sensors

All Dynalite sensors support multiple functions at the same time. This enhances efficiency and provides more information to Dynalite's head-end software and/or third-party systems on the local conditions.

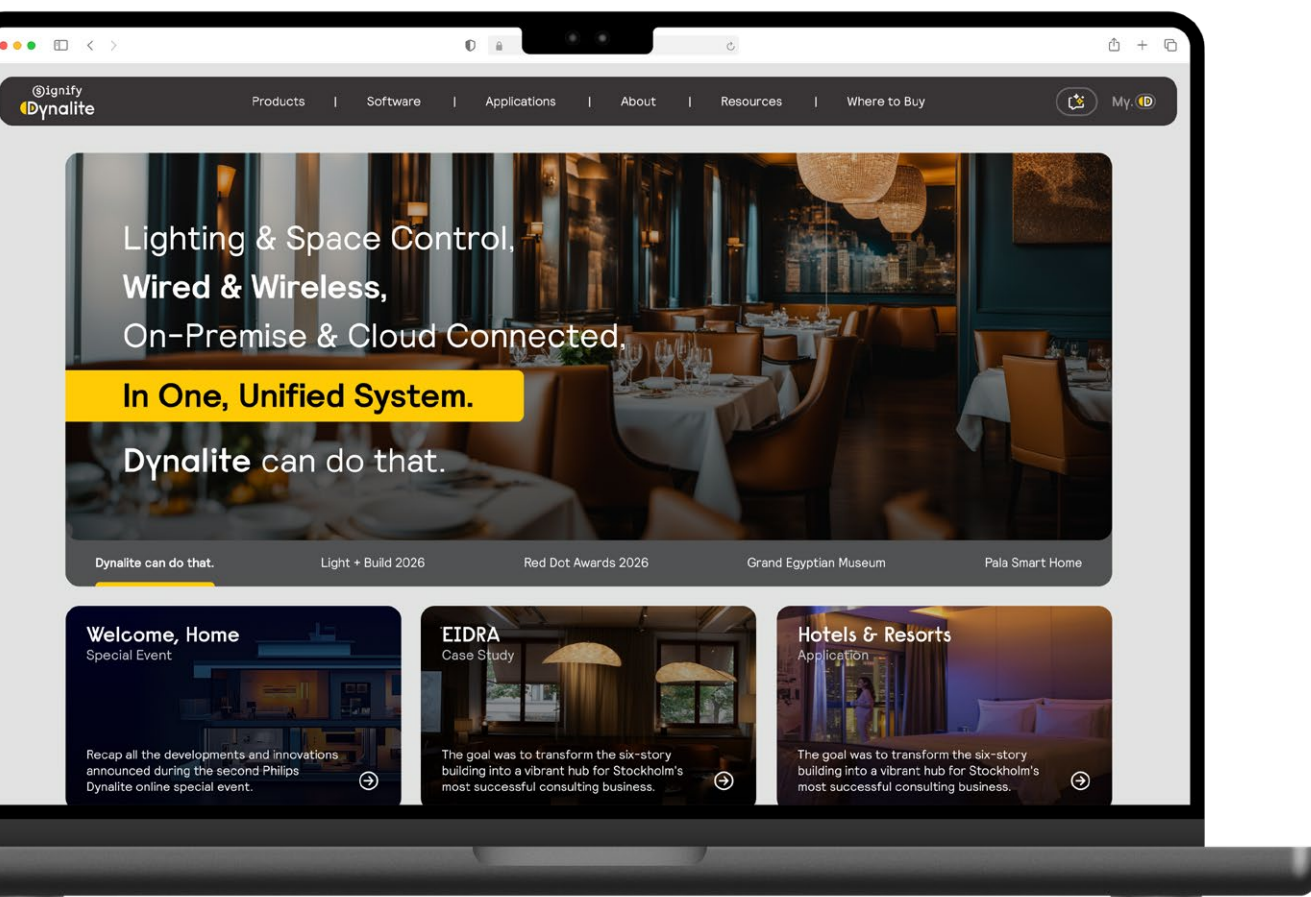

Integrations

Dynalite offers a range of network devices that enable multiple systems to be controlled from a single user interface. From audio visual and HVAC systems to shading systems for curtains and blinds.
